In mathematics, a set is a collection of distinct objects, considered as an object in its own right. for example, the numbers 2, 4, and 6 are distinct objects when considered separately, but when they are considered collectively they form a single set of size three, written  $\{2, 4, 6\}$ . Set theory is a branch of mathematical logic that studies sets, which informally are collections of objects though any type of object can be collected into a set, set theory is applied most often to objects that are relevant to mathematics.
